

KIOSK SOFTWARE

KIOSK SOFTWARE

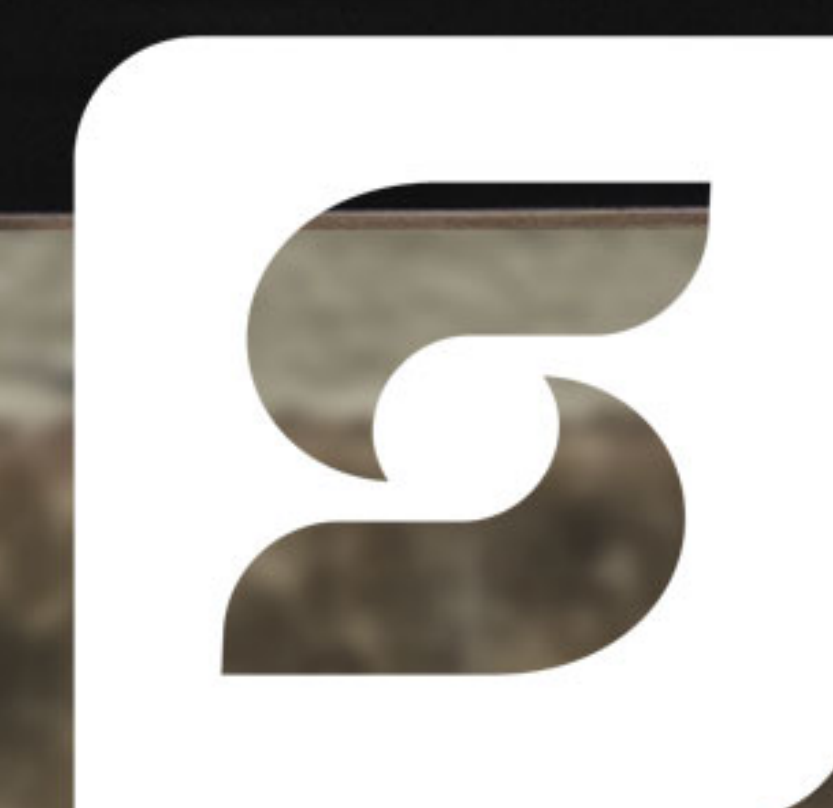

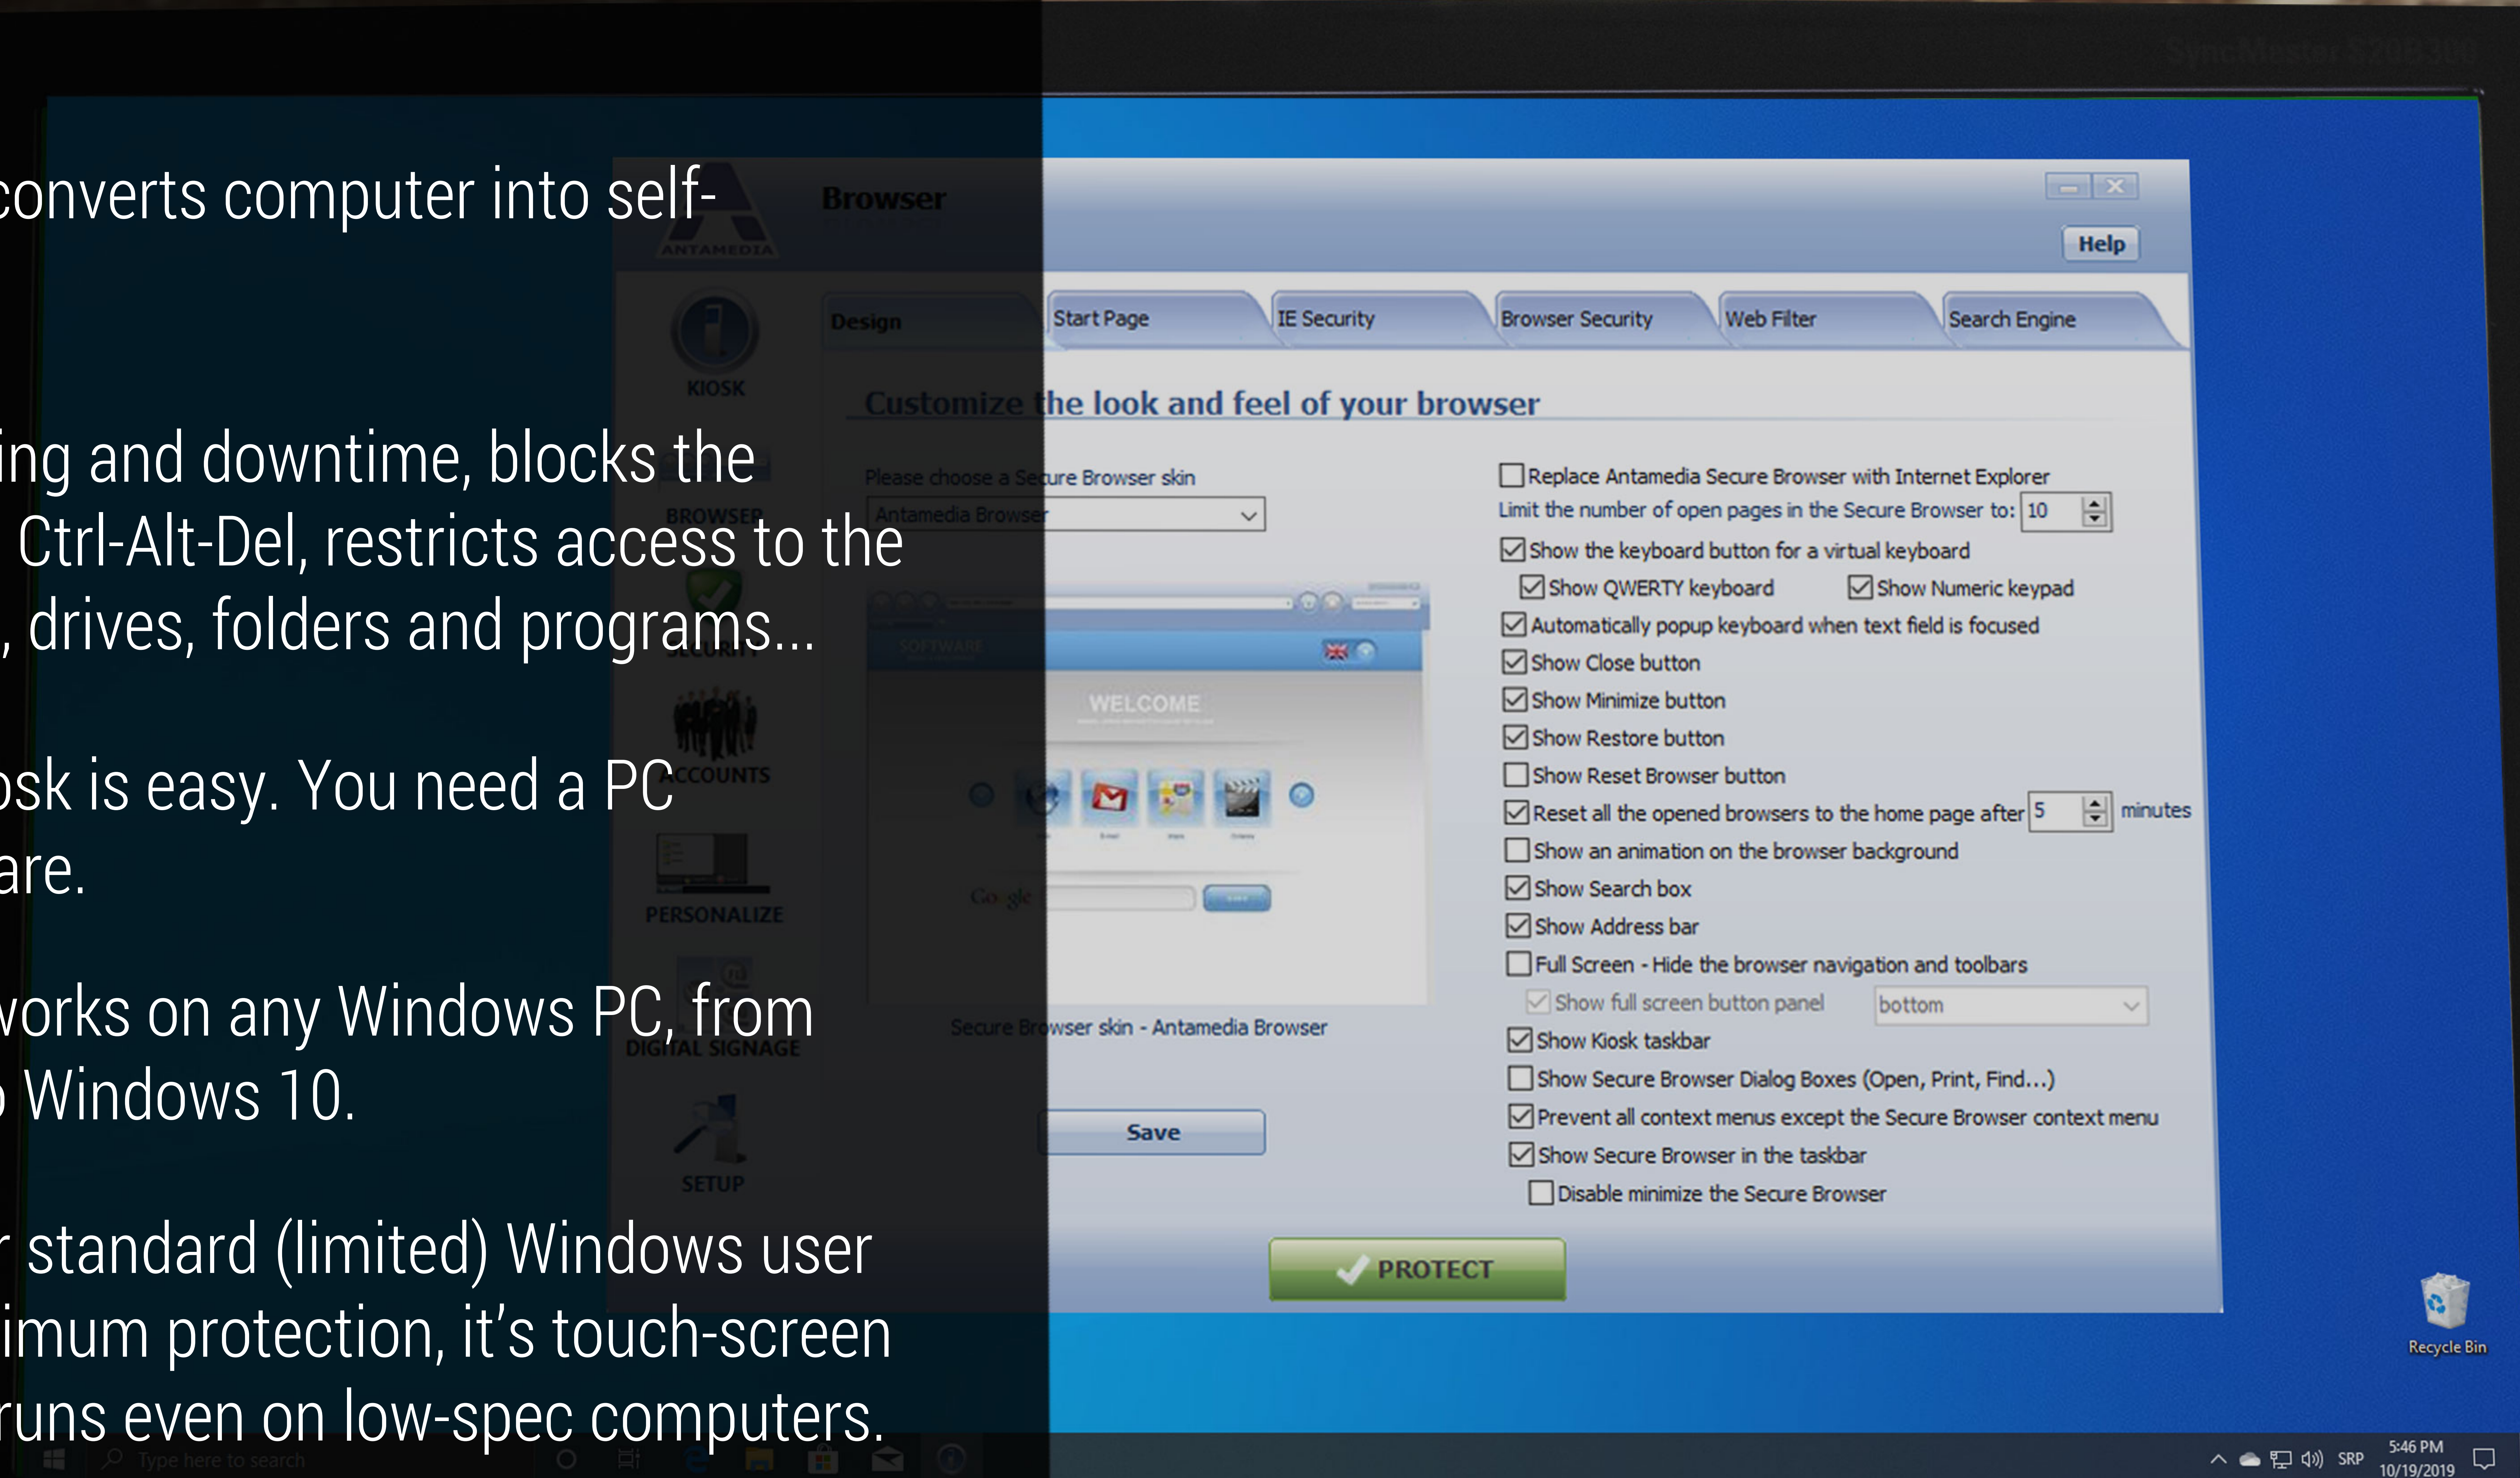

Kiosk software converts computer into self-service kiosk.

It prevents hacking and downtime, blocks the system keys like Ctrl-Alt-Del, restricts access to the system, desktop, drives, folders and programs...

Creating your kiosk is easy. You need a PC and Kiosk software.

Kiosk software works on any Windows PC, from Windows 7 up to Windows 10.

Kiosk runs under standard (limited) Windows user account for maximum protection, it's touch-screen compatible and runs even on low-spec computers.

MSTelcom

A man in a dark suit is shown from the side, interacting with a large, vertical kiosk screen. The screen has a green border. The background is a blurred interior space with large, classical columns. The lighting is soft, and the overall tone is professional.

Kiosk software replaces system shell and blocks access to the Windows Explorer, drives, desktop and taskbar.

You can use it to securely display your website or application, show marketing messages and advertisements, bill for Internet use, games or office applications, sell tickets for WiFi HotSpot around your kiosk, and much more.

Kiosk software prevents access to the Windows system files, standard browser menus and prevents hacking and downtime.

Suitable for:

Check-in & Reservation

Pay Station

WiFi HotSpot Kiosk

In-Store Product Information

Some of the Kiosk Software Features

- Blocks Applications
- Secure Browser

Kiosk Modes

Kiosk software includes many modes suitable for different deployment.

Kiosk Free

Kiosk Free mode helps you convert your computer into a secure workstation.

Kiosk Paid

Kiosk Paid mode helps you bill for Kiosk usage.

All-In-One

Pay Station with Kiosk is a combination of payment acceptor and secure Kiosk environment.

Protected Windows

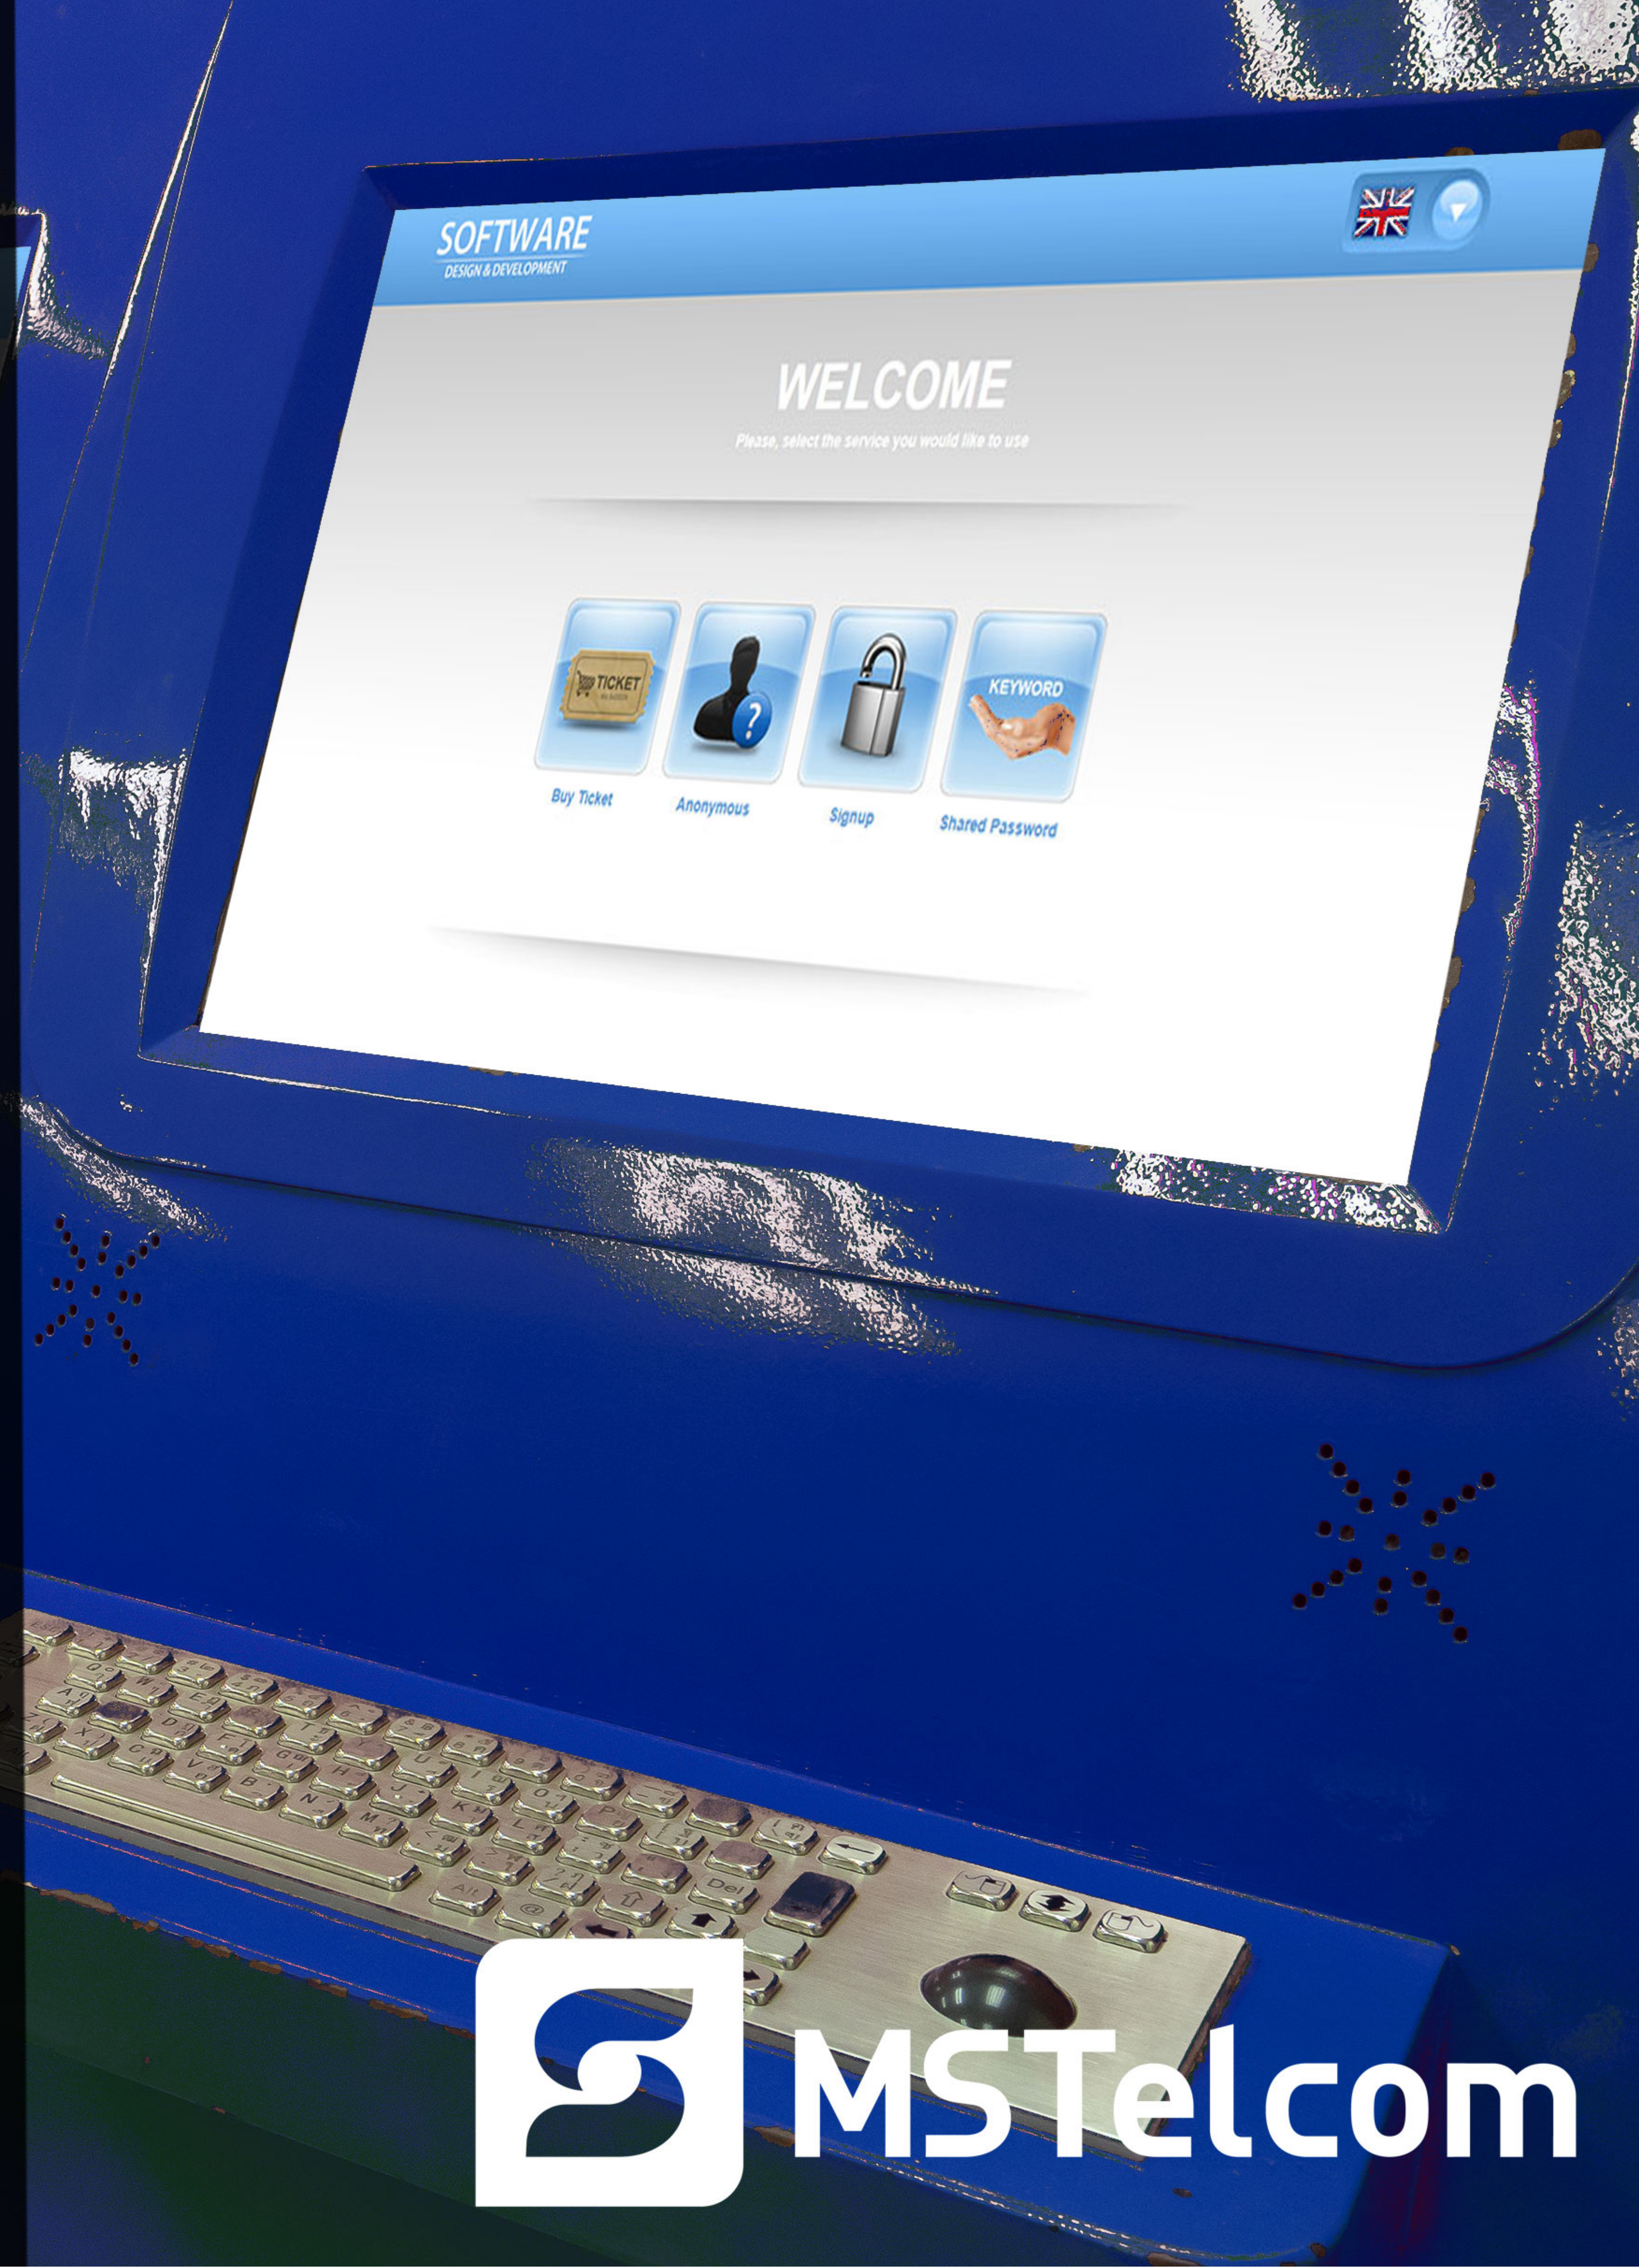

Protect your Windows with Kiosk's security options.

Digital Signage

Transform your Kiosk into the digital multimedia display.

Pay Station

Collect coin, bill and credit card payments from users.

Your customers can browse the pages free of charge for a limited or unlimited time, you can require entering a shared keyword, or you can require customer signup before the free session starts.

Kiosk can be configured to allow access after the customer inserts the money in the coin or bill acceptor, or to accept only those customers who already obtained a ticket with access code or the username and the password.

One Kiosk can be used for both receiving payments and issuing tickets (for WiFi also when used with HotSpot) and for serving applications or websites to your customers.

After the successful payment, the customer receives a ticket which can be used to login into the kiosk. Any remaining time can be used on the next customer login until it expires.
